

Contents

1	Introduction	1
1.1	Overview on the MedAustron project	1
1.2	Physics beam options and main parameters	2
1.2.1	The options for the accelerator parameters	2
1.2.2	Proposed accelerator option for physics beam	4
1.3	Comparison of nuclear physics facilities	4
2	Education and training aspects	7
3	Particle detectors	11
3.1	Overview	11
3.1.1	Classification of detectors	11
3.1.2	Future applications	13
3.2	Detector development	13
3.2.1	Beam parameters	13
3.2.2	Interaction in the detector material	14
3.2.3	Detector tests	16
3.3	Preparation of test systems	21
3.4	Requirements	22
4	Proton scattering facility	23
4.1	General concept	23
4.2	Nuclear radii	24
4.2.1	Introduction	24
4.2.2	Fraunhofer diffraction theory	25
4.2.3	Comparison of a diffraction pattern with experimental data	27
4.2.4	Results of r_{BS} determination from elastic proton scattering data	28
4.2.5	Reaction cross section measurements in the black sphere regime	30
4.2.6	Tentative physics programme	31
4.3	Optical potentials at intermediate energies	32

4.3.1	Relativistic nucleon-nucleus optical potentials	33
4.3.2	Global relativistic optical potential	35
4.4	Reaction cross sections	36
4.4.1	Introduction	36
4.4.2	Experiments performed at other facilities	37
4.4.3	Possible experimental directions at MedAustron	41
4.5	Proton-proton scattering	43
4.5.1	Off-shell behaviour of nucleon-nucleon interaction	43
4.5.2	Capability of the MedAustron	44
4.6	Instrumental aspects	46
4.6.1	Accelerator	46
4.6.2	Count rate estimates	47
4.6.3	Detectors	49
4.7	Measurement of spin-observables	55
4.7.1	Polarised proton target	56
5	Other physics applications at MedAustron	63
5.1	Proton computed tomography (pCT)	63
5.1.1	General ideas	63
5.1.2	Basics of proton computed tomography	64
5.1.3	A high resolution HepCT set-up	66
5.1.4	Some opportunities for applications of the proposed HepCT	69
5.2	Radiation damage in HTS	70
5.3	Dosimetry	72
5.3.1	Solid-state nano-dosimetry	72
5.3.2	Simulation of cosmic-ray components	73
5.3.3	Experimental prospects at MedAustron	75
5.4	Single-hit ion micro-probe	76
5.4.1	Attractivity of a single-hit ion micro-probe	76
5.4.2	Requirements for single-hit ion micro-probe experiments	79
5.4.3	Summary of necessary components	81
